Official Patient Summary Report

Patient Name: Sahil Khaire

Patient ID: P-1986

Visit Date: 2026-02-21

Doctor: Dr. Smith

YOUR HEALTH SUMMARY

Dear Sahil Khaire,

What's Wrong | You have been diagnosed with Hypertension (high blood pressure). This condition occurs when the force of your blood against the artery walls is consistently too high. It can lead to serious health issues, such as heart disease, stroke, and kidney disease if not managed properly.

What To Take | You have been prescribed Amlodipine 5mg. Please take one tablet in the morning with water. It is essential to take this medication as directed to help control your blood pressure.

What To Do | To manage your Hypertension, we recommend a low-salt diet. Try to limit your sodium intake to less than 2,300 milligrams per day. Additionally, incorporating regular physical activity, such as walking, into your daily routine can help lower your blood pressure.

Risk Status | Your current risk status is GREEN, indicating that your condition is being managed, and you are at a lower risk for immediate complications.

Follow Up | Please schedule a follow-up appointment for 2026-03-07. This will allow us to monitor your condition and make any necessary adjustments to your treatment plan.

Warning Signs | If you experience any of the following symptoms, please seek immediate medical attention at the emergency room: Severe chest pain, Sudden weakness, or Dizziness.

If you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

Dr. Smith
